## EDUCATION

## Fusion 360 | Motion Analysis | Mechanism Design

- Designed and assembled a 12-component biomimetic ornithopter mechanism in Fusion 360 to replicate flapping wing motion.
- Developed mirrored left- and right-wing assemblies using assembly constraints and component relationships to ensure symmetric motion.
- Applied revolute and rigid joints to accurately simulate linkage motion and mechanical constraints.

**Fusion 360 | Assembly Modeling | Engineering Drawings**

- Modeled 7+ major engine components including the engine block, crankshaft, connecting rods, connecting rod caps, pistons, piston pins, and fasteners using Fusion 360.
- Created a fully constrained four-cylinder engine assembly by applying assembly joints and component relationships to ensure accurate positioning and motion.
- Generated exploded assembly views, detailed engineering drawings, and manufacturing documentation from 3D CAD models.

Fusion 360 | Mechanical Assembly | Engineering Drawings

- Designed a rigid flange coupling assembly using Fusion 360 following standard machine design principles.
- Created detailed part models, assembly views, and manufacturing drawings with dimensions.
- Prepared fabrication-ready engineering documentation for all assembly components. .

## POSITIONS OF RESPONSIBILITY

- Mentored 11 first-year students by providing academic guidance and campus support.

- Coordinated publicity and participant outreach for the institute's annual technical festival.

- Co-developed an award-winning interactive stall and mentored student teams in the subsequent edition.
